Profiles	 LinkedIn lucasribdev	 GitHub lucasribdev
Summary	Senior Frontend Engineer with 7+ years of experience building scalable React applications, distributed frontend architectures, and high-availability platforms for SaaS, education, and healthcare products. Specialized in React, TypeScript, micro-frontends, and frontend architecture, with a strong focus on performance, maintainability, and developer experience.	
Skills	Frontend React, TypeScript, JavaScript, TanStack Router, Next.js, Tailwind CSS Architecture Micro-frontends, Module Federation, SSR/SSG, BFF, Design Systems Backend & Infrastructure Node.js, NestJS, Supabase, AWS, GCP, CI/CD Domain Experience B2B SaaS, Healthcare Systems, Distributed Systems, High-Availability Applications	
Experience	Arcotech Remote Software Engineer III Sep 2024 - Nov 2025 Designed and maintained a distributed micro-frontend architecture using React, TypeScript, and Webpack Module Federation, improving platform scalability and enabling independent deployments across multiple teams. Developed shared libraries and internal tooling adopted by different squads, increasing development consistency and reducing duplicated implementation efforts. Implemented fraud prevention and data integrity validation mechanisms in large-scale educational platforms, improving application reliability and operational security. Contributed to platform stability, team autonomy, and faster delivery cycles through frontend architecture evolution and improvements to development workflows. https://www.arcoeducacao.com.br/ Alliança Remote Senior Frontend Engineer Jan 2022 - Aug 2024 Led the frontend architecture and development of a healthcare SaaS platform responsible for processing sensitive and regulated	

data, focusing on scalability, maintainability, and long-term product evolution.

Developed secure, high-performance interfaces for large-scale operational workflows, following best practices for data protection, reliability, and user experience.

Collaborated closely with product and backend teams to improve operational efficiency, data reliability, and regulatory compliance across the platform.

Contributed to the modernization of frontend architecture and engineering practices, improving application maintainability and accelerating development velocity.

Mobly

Remote

Frontend Engineer

May 2021 - Dec 2021

Developed a self-service kiosk solution for physical retail stores, focusing on usability, performance, and stability in high-traffic, continuously operating environments.

Integrated frontend interfaces with internal ordering systems and APIs, ensuring efficient communication, real-time synchronization, and operational reliability.

Contributed to optimizing in-store operational workflows and reducing customer wait times, improving user experience and increasing service efficiency.

<https://www.mobly.com.br/>

BBL e-SPORTS

São Paulo, Brazil

Frontend Engineer

Sep 2019 – May 2021

Developed high-traffic web platforms for e-sports events, focusing on performance, scalability, and user experience in applications accessed simultaneously by thousands of users.

Built real-time interfaces capable of handling high traffic spikes, ensuring smooth performance, responsiveness, and stability during live broadcasts and events.

Contributed to application high availability and reduction of operational failures, delivering a reliable and seamless experience for users during large-scale events.

Pravy

São Paulo, Brazil

Junior Frontend Engineer

May 2018 – Sep 2019

Developed landing pages, promotional websites, and email marketing campaigns focused on performance, responsiveness, and user experience across multiple devices and digital channels.

Contributed to increased engagement and conversion rates through improvements in usability, visual structure, and optimization of digital campaigns.

Implemented modern and optimized interfaces, ensuring visual consistency, efficient loading times, and an improved browsing experience for users.

Projects

Templo

Jan 2026

Developed a scalable web platform focused on connecting players with communities, servers, clans, and LFG groups, with a strong emphasis on scalability, user experience, and online community organization.

Implemented Discord authentication, post creation, user profiles, likes, views, advanced search, filtering, and infinite scrolling to provide an optimized browsing experience across communities and publications.

Designed the data layer using Supabase and PostgreSQL with relational tables, indexes, triggers, Row Level Security (RLS) policies, and RPCs for optimized queries, relevance scoring, and platform metrics.

Built the frontend using React, TypeScript, TanStack Router, TanStack Query, and Tailwind CSS, focusing on component reusability, performance, and maintainability.

Used Cloudflare Workers for request processing and distribution, contributing to a modern, distributed architecture designed for scalability and future growth.

Stack: React, TypeScript, TanStack Router/Query, Supabase, PostgreSQL, Tailwind CSS, Cloudflare Workers.

Social Skate

Nov 2025

Contributed to a nonprofit organization focused on supporting vulnerable children by designing and developing the institutional platform using React and Tailwind CSS, with a strong focus on performance, responsiveness, and maintainability.

Implemented a serverless CMS solution using Decap CMS integrated with GitHub, enabling content management without reliance on traditional backend infrastructure.

Enabled non-technical users to manage and update content autonomously through automated commit-based publishing workflows, reducing dependency on the engineering team.

Contributed to reducing operational costs and simplifying infrastructure by adopting a lean, scalable, content-oriented architecture.

Improved platform sustainability and maintainability through a decoupled structure designed for long-term evolution and operational simplicity.
