

Lucas Ribeiro

Senior Front-End Engineer | React, TypeScript

✉ contact@lucasrib.dev 📍 São Paulo, Brazil 🌐 [Portfólio](#) [in](#) [lucasribdev](#) [m](#) [lucasribdev](#)

Summary Senior Front-End Engineer with **7+ years of experience** building web applications with React and TypeScript. Experienced in **front-end architecture, micro-frontends, Design Systems, and shared libraries**, leading technical initiatives from discovery and solution design through production. Strong background in building digital products, reusable solutions adopted across multiple teams and applications, API/BFF integrations, and high-performance user interfaces.

Skills

Front-End
React, TypeScript, JavaScript, Next.js, Tailwind CSS

Architecture
Micro-frontends, Module Federation, Design Systems, Shared Libraries, BFF, REST APIs, WebSockets

Quality
Jest, React Testing Library, Cypress, Performance Optimization, Accessibility, Code Review

DevOps
GitHub Actions, CI/CD

Experience

Arcotech Remote
Software Engineer III Sep 2024 - Nov 2025

- Contributed to the transition from a legacy educational platform, maintaining the existing system until its decommissioning and later joining the team responsible for evolving the new platform.
- Improved front-end architecture using **React, TypeScript, micro-frontends, Design System, and BFF**, implementing performance optimizations through virtualization, reduced re-renders, and component simplification.
- Developed **content management and consumption workflows** for teachers and students, supporting the upload, viewing, and download of documents, videos, and other educational materials.
- Designed and implemented **shared packages across micro-frontends**, including a PDF viewer and a custom video player, reused by approximately **15 developers across 3 squads and 4+ applications**.

Alliança Remote
Senior Front-End Engineer Jan 2022 - Aug 2024

- Technically led projects from **discovery and architecture definition through production**, mentoring approximately **5 developers** and driving technical decisions, code reviews, refinements, and collaboration with Product, Design, and Back-End teams.
- Proposed and technically led the architecture of a **schema-driven digital forms platform**, replacing paper forms completed on-site with a configurable solution supporting dynamic fields, validations, and conditional rules.
- Developed **form completion and electronic signature workflows**, allowing patients to complete forms on their own devices before appointments or on tablets at healthcare facilities, reducing reliance on printing and manual processing by reception staff.
-

Technically led the **medical exam scheduling experience** from conception through delivery, combining requested exams, nearby facilities, pricing, availability, and scheduling constraints to prioritize dates and locations where patients could complete as many exams as possible.

Mobly

Remote

Mid-Level Front-End Engineer

May 2021 - Dec 2021

- Developed a **self-service kiosk solution** for physical retail stores using React, Next.js, and TypeScript, allowing customers to browse product variations, prices, inventory, and shipping options and place orders without direct assistance from a salesperson.
- Optimized workflows involving large numbers of items through **virtualization**, preventing unnecessary rendering and keeping the interface responsive under heavier client-side workloads.

BBL e-SPORTS

São Paulo, Brazil

Mid-Level Front-End Engineer

Sep 2019 – May 2021

- Developed digital platforms for **e-sports events and tournaments**, integrating live streams, chats, results, statistics, voting, and real-time match updates.
- Integrated applications with **APIs and WebSockets from multiple games**, adapting data contracts and workflows to changes in game-provided interfaces while maintaining real-time experiences during live events.
- Contributed to technical decisions and implementation of **HUDs and real-time integrations** connected to Steam data, using React, Vue.js, Electron, TypeScript, and Node.js.

Pravy

São Paulo, Brazil

Junior Front-End Engineer

May 2018 – Sep 2019

Developed landing pages and digital campaign experiences with a focus on **responsive design, performance, and user experience**.

Projects

Templo

Jan 2026

- Designed and developed end-to-end a platform for creating and discovering **gaming communities, servers, and teams**, featuring profiles, listings, feeds, filters, external integrations, and real-time online player information.
- Architected the application using **React, TypeScript, TanStack, Supabase, PostgreSQL, and Cloudflare**, implementing authentication, RLS-based authorization, BFF, PWA capabilities, and SEO strategies.

Education

Universidade Bandeirantes

Bachelor's Degree

Information Systems

Jan 2009 - Dec 2012

Certifications

CS50's Web Programming with Python and JavaScript

Mai 2025

Harvard University

CS50x: Introduction to the intellectual enterprises of computer science and the art of programming

Out 2024
